I. Foundations	3
1. Introduction	7
1.1. Motivation	7
2. Methods	9
2.1. Approach	9
II. Application	11
3. Cross-references	13

`book: true` switches to the book class (`scrbook`): # becomes a **part**, ## a **chapter**, ### a **section**.

Toggle the numbering: `numbersections: true` in the frontmatter above numbers parts, chapters and sections (Part I, 1 Chapter, 1.1 Section) — and, with the same switch, turns cross-references into numbered references (“Chapter 2”) instead of plain jump links. Set it to `false` (or delete the line) and `export` → no numbers and plain jump links. Control the depth with `secnumdepth:` (default 5, i.e. down to the finest level).

Part I.

Foundations

Introduction to the first part. The embedded atomic notes below become chapters automatically, because they sit under a # part.

1. Introduction

An atomic chapter note. Its H1 becomes a `\chapter` via auto-heading-shift when embedded under a part (#).

1.1. Motivation

A subsection of this note — rendered as a `\section` in the book (e.g. “1.1”).

2. Methods

A second chapter note. It also becomes a numbered chapter.

2.1. Approach

A section on the methodology.

Part II.

Application

3. Cross-references

With `numbersections: true` these links resolve to numbered references: see Chapter 1 and Chapter 2. With numbering off they would stay plain jump links showing the note title as text.
